Symantec Endpoint Protection Setup Manual

If there is other antivirus software they should be uninstalled before installing Symantec EndPoint Protection Software. Otherwise, Different Antivirus software can detect definition files of other software as a threat that can create some problems. EndPoint software can be downloaded from “ftp://ftp.cc.metu.edu.tr/Security/Symantec_Antivirus/Symantec_AntiVirus_Endpoint_11_Protection/”. It should be extracted to a folder and SETUP.EXE is run. When Setup begins, you can pass to next step by clicking on “Next” button. (Figure 1)

Figure 1: Welcome Screen

On the next step, after reading license agreement you can pass to next step by clicking “Next”. (Figure 2)
If there is any Endpoint Protection Manager Server that will manage your software installed by your Unit/Department Coordinator, Then Managed Client should be chosen and clicked “Next” for next step. If there is no server, then “Unmanaged Client” is chosen to continue. (Figure 3)

On the next step, setup type should be chosen. It is advised to choose typical type of Setup to install standard properties for inexperienced users. (Figure 4)
As a last thing for setup, it can be started by clicking “Install”. (Figure 5)

Or;

You will see screen like below if you choose custom type of setup.

If you are using email client then you have to choosed packages that is under “Antivirus Email Protection” subtitle. If you dont want to install Firewall then unselect Firewall and Intrusion Prevention option.(Figure 6)
On the next screen you can choose Protection options that will be applied after setup finished. “Enable Auto Protect”, to keep computer automatically under control after setup. “Run LiveUpdate”, to keep software updated after setup. “Disable Windows Defender”, to prevent any conflict between Windows Defender and Symantec endpoint Protection security risk protection. (Figure 7)
